WE HAVE ON FILE MANY TESTIMO-NIALS RECEIVED FROM OUR SATIS-FIED CUSTOMERS. SPACE ONLY AL-LOWS US TO SHOW A FEW OF THEM.

#### PEARS

Many pear growers have experienced serious trouble with pear psylla, For two years we have had perfect control of this insect by the use of a dormant oil in early spring, followed by an application of a summer oil in 20 ft, apart is a very satisfactory planting distance.

Clapp's Favorite. August 15th. barge, bright red blush. Good quality.

Bartlett. September 1st. Large, yellow, standard canning variety. Beurre Bosc. Getuber. Very large cussel variety. Finest quality of any riety grown. The tree itself for the first few years is a poor grower, having tendency to be quite erooked but outgrows this with age.

Seckel. September 10th. Fine for pickling or table use.

							PLUM
1λ	ín.	eal.	and	np.	5-7	1t.	5455c5sansrossabb15454c*anrastro

\$6.00 Abundance. Early August. Light with red cheek. Burbank, Middle August, Deep red with yellowish background, Extra

Cerman Prune, September. A good purple preserving variety. Italian Prime. One of the largest of prime varieties.

Plant 15 ff. apart. 2 yr., % in, cal, and up, 4-5 ft. Orange. Well known yellow variety. Champion. Green variety, follows Orange.

SHRUBS

Shribs naturally vary in their habits of growth. Some dwarf, others of medium growth, and still others larger. We shall in each instance furnish number one plants of the varieties listed.

of the varieties listen.
\$0.50 each except where otherwise stated,
Mthea. (Rose of Sharon) Red, pluk, or white. Very erect. Late Summer.
Almond. Pluk Flowering. Beautiful old fashioned plant. Each 75c.
Azalea Mollis. A Japanese variety ranging from yellow to orange. 12-18 in. 6 \$2.00.
Azalea Kaempferi. (Torch Azalea) Heantiful orange red flowers. 12-15 in. 6 \$2.00

Azalea Amoenn. A beautiful evergreen strub, covered with small, rosy pink flowers in May. We offer selected plants -- brond and bushy, 12-15 in height @ \$2.50

Barberry, Red Leaved, 18-24 in. @ 75c

Beauty Hush. One of the newer varieties.
In early June. 18-24 in. @ \$1.00.
Butterfly Hush. Although of a woody nature, the growth kills back each winter to within a few inches of the ground, then making three to five feet the following summer, it being covered with purple or lavender sweet scented flowers which attract myriadis of butterflies. Hence its name.

Coral Berry, Pluk flowers, foilowed by red herries.

Hentzia Gracilis. Dwarf, white. June.

Forsythia Fortunel. (Golden Bell) Brilliant yellow in lale April or Early May.

Forsythia Speciabilis. One of the earliest and most profuse bloomers.

Forsythia Suspensa. A drooping variety — sometimes Iralned as a vinc. it's drooping branches make a beautiful sight.

Honeysuckie, Pink Tartarian. Pink flowers. June. Followed by red berries in late

Honeysnekle, White Tucturian. Similar to the pink variety, but flowers wille.

Hydrangea P. G. Large cone shaped flowers. Late summer, Hydrangea Hills of Snow. White ball shaped flowers. July till frost.

dapan Quince. Brilliant scarlet flowers in May dapan Kerrin Fl. Pl. A most striking bush with greenish bark and double yellow blossoms in June. 75c each.
Lilac. Purple.

Lilac. Named varieties, 2-3 ft. 4 75c.

Amelia Dupry. Single, light blue.
Doyen Ketteler. Double, light pink.
Madam Lemaine. Large, double white,
Sony, de Ludwig Spacth. Single, red.
Mock Orange. Cream colored, very sweet scented flowers. June

Mock Dringe Virginalis. An improved variety of the old fashioned Mock Orange.

Larger flower, 75c each.

Larger flower, 75c each.

Spirea Anthony Waterer, Dwarf, Pluk, June and July.

Spirea Tricorarpa, One of the newer varieties similar to Spirea Van Honettl—
illossoming later, 75c each.

Spirea Van Honetti, Mass of white. Early June.

Snowball, Japan, White ball shaped flowers, Late May, Each 75c.

Snowball, Japan, White ball shaped flowers berries in fall.

Weigelia Eva Rathke, Crimson flowers, June.

Weigelia Rosen, Pluk, Early June.

EVERGREENS We offer for forestry or Chrisimas tree planting, 3 year transplants in the following varieties:

Cotorado Spruce Douglas F r Austrian Pine

\$30,00 per 1900 \$4.00 per 100

For ornamental purposes, we can furnish about 75 varielles of evergreens in numerous sizes. These have been transplanted every three years, pruned every year, and are first class in every respect — in fact much broader and linker than the average grade of evergreens as offered by various nurserymen. A special descriptive list of sizes and price list will be mailed upon request.

\$20,00 per 100

\$2,25 per Ten Texcept as noted t Anemone, Japan. 30c. each. Blunket Flower (Gallfardia) Bleeding Hearl, 50e each, Contecting Seas, Tree, with Cameronary Bens. #### Please do not confuse us.

We have no connection with any other "Barnes" company. Members of ome company are:

Norman H. Barnes

James P. Burnes

#### TO OUR FRIENDS:

The year of 1930 has been a notable one for low prices. We are orehardists us well as muserymen, and are therefore able to appreciate the orehardist's viewpoint. Were the law prices of 1930 confined only to fruits we might well unader at the wisdom of our calling. But, we can find a little consolution in the fact that the fruit industry probably has suffered no more than other lines of business whether it be vegetable growing, poultry raising, or manufacturing. Copper has sold at the lowest prices since 1896, steel has been at prewar prices and so on down the list. Unemployment has reduced the buying power of the public, resulting in a generally abunmaal condition from which we cannot say that overproduction in any particular line is responsible. There are occasionally unsatisfactory years in any industry, and we look forward to the year 1931 with the optimism that the wirst is past, and that two such years do not often follow one another.

It has always been one policy to give the most for the least possible price, We have no salesmen, and here is a big saving which we have passed on to mir customers. Recently, we have issued an abbreviated ratalogue in circular. This of course greatly reduces the rost of our advertising and makes

TE FURTHER DESCRIPTION OF VARIETIES IS DESIRED, WE SHALL BE CLAD TO FURNISH A DESCRIPTIVE CATALOGUE UPON REQUEST

#### CERTIFICATION

Our experience in the past, has been that few people are willing to pay the additional cost of having seals put on to certify trees. However, we are still continuing our practice of having the trees inspected by Dr. J. K. Shaw of Amberst, Mass., nationally known as the originator of identification of apple trees by their leaf characteristics. Dr. Shaw's statement of the 1931 inspection

> Amherst, Mass. September 13, 1930

#### TO WHOM IT MAY CONCERN:

This is to state that I have examined for trueness to name all the apple stock now growing in the nurseries of the Wallingford Nursery of Wallingford. Conn. and that as they now stand in the nursery row all trees are, to the hest of my knowledge and belief, tene to name.

Very truly yours, d. K. Shaw

### NON-WARRANTY

We strive to avoid mistakes but in the event that any unresery stock sold by us should prove untrue to the label under which it is sold, provided notice and proper proof are furnished to the seller, the seller shall, it the option of the larger, either refill that portion of the order which was mislabeled, by another delivery of stock or refinal the purchase price. But in any case the seller is not to be held responsible for a sum greater than the original selling price of such stack. All sales or agreements to sell are made subject to shortage of mirsery stock from lire, frusts, flood, drought or other causes beyond control of the sellers.

## APPLICATION OF PRICES

Customers may select 5 of any kind of fmit such as 5 peach at the 10 rate, 35 at the IDD rate, 350 at the 1000 rate.

## MINIMUM ORDER

On aerount of the high cost of hundling orders, we cannot accept orders of less than \$1.00.

## DISCOUNT

5% Discount may be deducted on all orders where the total amount is remitted with the order and this is sent before April 1st.

## TESTIMONIALS

Northumberland, Pennsylvania

January 20, 1930

Your stock which I first received from you four years ago bore last season and the first hundred peach were true to mame. I have great confidence in

C. E. Hillish

Dimkirk, New York

March 10, 1930

We want to express our appreciation of the good quality of your mursery stock. The 80 trees bought of you last year are all alive and growing fine.

Yours truly.

C. E. Shero

East Greenwich, R. L.

April 9, 1930

Bentlemen:-You gave me the supprise of my life when I saw the size and good condition of the trees I received. I removed them from the hox in the freight house, and had the general country corner andience and they all expressed the same opinion,

Yours truly.

W. O. Young

Grafton, Muss. April 7, 1930

Dear Sirs:-

I was very well salisfied with both the trees and the plants you sent me.

A. P. Bruwn

Torrington, Conn. May 5, 1930

Dear Sirs :--

Dear Sirs :-

Everything was in perfect condition. You will receive my orders for any and all trees in the future. Thanking you very much for patiently waiting for my check, I remain,

A satisfied customer,

George Pascus

Southbridge, Mass.

Muy 7, 1930

I purchased trees from you six years ago, and they are fine trees. Very truly yours,

John P. McKinstry

### SIZE OF TREES

Caliper or diameter governs the size of all fruit trees except 1 year apple. Height is only approximate.

#### STANDARD APPLE TREES

Permanent apple trees should be planted from 36 to 40 ft, apart. Filler varieties which bear young and enusistently such as Wealthy, Wagener, Yellow Transparent, or Rume Branty, and also breach frees where land and climate are suitable, may be planted between, making the distance 18 to 20 ft. The filler trees will carry along the permanent Iries so that when it is necessary to take out part, the rost of growing those remaining will have been paid by the ymmiger, quicker bearing varieties.

As the trees begin to crowd, by taking out every other tree, they will be left about 28 ft. apart diagonally, and in later years, again taking out every other tree, will leave them 40 ft. apart. Thus for 25 to 30 years the land will be returning an extra crop before the permanent trees need the room.

We wish also to call attention to our 5 year ald apple trees. They were transplanted 3 years ago, making it possible for us to dig them with good Many of these trees bore apples in the oursery row in 1930, and will save the grower much time. We recommissed them especially to home planters.

Exceptions: Standard Melniosh and falliwin at \$5.00 per 100 less than regular

Owarf Douch McIntosh and Baldwin at the each more than regular prices.

Milton in I yr, stock only, 5c each extra. Mucoun and Red Rome in 1 yr, and 2 yr, at 5c each extra. Red Gravenstein (Washington strain) 5c each extra.

Baldwin, Large, red winter apple. New England Baldwins have made a name for themselves in the export trade this year. \$5.00 per 100 less than

\*Cortland. Very similar to Mchilush in flavor. Larger, darker red, ripens two weeks later, hangs to tree beller, keeps better, and well worth planting.

Delicions. Large, red, fancy table apple. Early winter, Duchess. Striped red. Early Anguit. Following Red Astrachan.

Early McIntosh. A cross between McIntosh and Yellow Transparent. Originated at Geneva Experiment Stations, New York. The fruit is very similar to Melutosh in all respects, ripening after Yellow Transparent. Tree is a good thrifty grower and bears annually.

Fall Pippin. Well known Fall variely.

\*Gravenstein. Large, striped, red.

Red Gravenstein. (Meade strain). Similar to Gravenstein, but darker red. Fruit allowed to stay on free will rolor solidly.

Red Gravenstein. (Washington slipin). Originated in the state of Washington = said to be the very best strain of Teel Gravenstein; similar to Coavens stein, but a much darker red. 5e each extra.

King. A very large, red Fall apple! Fine for table use and baking. Supplied in 6-8 ft, transplanted stock only. (Macoun. (Description by New York Fruit Testing Association, Geneva,

Just as Early McIntosh advances the season for the McIntosh type of

apple, Marnin produces a late crop of these red-skinned, white-fleshed, righly tlayored, aromatic applies. The season of Macoun is from one to two months later than that of Alchitosh with Cortland midway between. In shape, the fruits of Maconn are similar to those of Melntosh; the color is a darker red, less striped, and with a heavier bloom; the tlesh is much the same in color, texture, flavor and aroma. The trees bear regularly and heavily. This promises to be an apple of great merit roming in, as it does, long after all other MeIntosh like annles are out of season

McIntosh, McIntosh, may well be called the King of Apples for New England and vicinity. September, \$5.00 per 100 less than regular prices.

Milton. (Description by New York Prnit Testing Association, Geneva, New York.) I yr, stock only. 5c cach extra.

Milton is a sister of Early Melutosh which ripens its crop a month later. Its main value is that it is a Melutush type which ripens a mouth before Me-Intosh. The tree is vigorous but not as large as that of Early MeIntosh. The fruits are covered with a very attractive pinkish red and heavy bluom. The flesh is white, tender, crisp, juicy, and of Melntosh flavor and aroma.

Northern Spy. Well known early Winter red variety.

Opalescent. Very large, red apple. Fall.

Red Astrachan. Best, early red apple. August 1st.

Red Spy. A sport of Northern Spy. Similar in all respects to Northern Spy except in coloring in which it much surpasses its parent, having a solid

R. I. Greening. Fine dessert variety. Early Winter.

Red Rome. A red strain of the Rome Beauty. Se each extra. Rome Beauty. Late Winter, red apple.

Roxbury Russet. Very late Winter russet apple.

Stark, Large, red, late Winter. Very productive, 5 yr, trees only.

Stayman Winesap. Standard Winter apple in New Jersey. A good variety

for late Winter in some sertions of New England. Large, red apple. Wealthy. Fine filler variety. Often bearing fruit in Nursery at two years

of age. Red. Late August. \*Wagener, Great Filler variety, Bears young, Red, early Winter,

Williams Red. Summer apple, Pallowing Duchess.

Yellow Transparent. The first early apple of impurtance. Fine filler

\*Hyslop Grab. Very productive. Red.

## PEACHES

For three years, we have left our peach trees in the held during the winter having them freshly dug in the spring. The results have been all we could pussibly ask. Satisfied enstancers everywhere. We believe firmly that now is a most apportune time to plant. The Carolinas and Georgia which two or three years agn were in averproduction are on the decline, and to the best of mr kunwledge, there has been un large planting of peaches anywhere which will replace these states. A peach orchard planted now, will most certainly come into hearing with less competition from autside sources than for years. On necount of our peach trees being in the liefd we will not have an neen-

rate grade count until spring, which may make a substitution of sizes necessary in certain instances, but we hope not. Order early and have the trees reserved. Plant 18 to 20 ft, apart.

13 in, cal, and up, 5-7 ft. Extra large grade ..... prices

Gentlemen:--

Goods all received in good shape. Plants were fine. Kindly receive my thanks for your accurate business ways and very promptness in your dealings. Wishing you most successful business, I am,

G Miedema.

#### TIME OF RIPENING IS FOR CONNECTIGUT CONDITIONS

Greensboro, August 1st. Medium size. White flesh, Very productive, Arp Beauty, August 3rd, Medium size, Yellow flesh, Very productive, Extra fine quality.

Carman, August 15th, Medium to large, White, Very harrly variety,

Gumberland. New, A very improved Parman, originated by the New Jersey Experiment Station. Larger, better colored and ABSOLUTELY PREE-STONE, ripening at same time as Carman, or a triffe ahead, Golden Jubilee. Here is the most outstanding introduction of the New

Jersey Experiment Station, where for years the state has been attempting to breed and introduce better varieties than those commonly grown. Buds of our trees were taken from trees grown by the New Jersey station which have already come into fruiting in a small way. Our own experience with the fruit curresponds to the description as given by the New Jersey station which we The Galden Juhilee peach is a semual generation seedling of Elberta m X

Greenshoro. It is a vigorous tree similar to Elberta in labit and folinge. The variety sets fruit hads freely, blooms a few days later than Elberta and appears to be a little more hardy. The fruit is avail in form, freestone and very similar to Elberta, in shape, color and appearance. The size is a little smaller than Elberta, but the quality is fully as good. Its season is 3 to 5 days earlier than Carman or about 3 weeks earlier than Elberta. This new peach should be set upon ideal, sandy or gravelly, peach soils for best results." It was first introduced by the New Jersey Station in 1926.

10e each extra over other varieties.

-Rochester, August 20th, Medium size, Yellow, Very hardy variety,

Eclipse, New, A large YELLOW FREESTONE ripening just after Carman. Originated at New Jersey Experiment Station.

South Haven. We offer this variety this season for the first time. We have watched the fruit on a neighboring orchard for the past three years, and are much impressed with its good qualities which make it seem to us far alread of any of the old time varieties commonly grown to ripen at this time. The tree is a very vigurous grower, heavy eropper, and fruit is large, to very large, yellow and freestone. Ripens last week in August.

Hiley. Medium size, white freestone with brilliant red cheek. Fine flavor.

Ghampion. About September 1st. Very large, juley variety, farmerly a standard commercial variety, but now recommended for home planting.

Belle of Georgia. September 1st, Often called White Elberta. Fine

Elberta, September 4th, Known to all, King of peaches.

J. H. Hale. September 8th. Extra large. Round. Otherwise similar to Lizzie, September 20th. Best of its season. Similar to Elberta, being a

chance seedling of that variety. Not quite as much red, but otherwise similar, CHERRIES

4 yr, transplanted 1 in. cnl. and up, 6-7 ft. (Furnished in varieties starred) 2 yr., 11 in. cal., 5-7 ft.

Black Tartarian. Very dark. Delicious variety. Governor Wood, Light, Early Cherry.

Windsor. Deep red. Very large, fine quality. Montmorency. The most commonly planted sour variety,

South Hadley, Mass.

\$65.00

Denr Sirs:-

Our order came through in time condition. We thought it was unusually well packed and everything was moist and fresh when we unwrapped the hundle. We were also much pleased with the trees which look very thrifty and full of life Mary H. Miller

OUR PATRONS WILL GREATLY OBLIGE US BY USING THIS
